SUMMARY

Full-stack engineer with 3+ years of experience across education, telecom, and business platforms. Builds AI-powered applications with TypeScript and Node.js, including OpenAI integrations, RAG pipelines, and tool-calling workflows. Combines backend development with React and Vue interfaces, access control, and practical evaluation of AI features.

EXPERIENCE

WeGlobal.ai — Senior Full Stack Developer Aug. 2025 – now
Vue 3, TypeScript, Node.js, OpenAI API, RAG *Astana, Kazakhstan*

- Integrated OpenAI API into an education platform, implementing chat completions, streamed responses, and tool/function calling through Node.js services and a Vue 3 interface.
- Built a RAG pipeline for educational content: document ingestion, chunking, embeddings, and semantic search using vector similarity; generated answers with source citations.
- Developed system prompts and reusable skills for educational workflows; evaluated retrieval relevance, answer grounding, and tool selection on a regression question set.
- Implemented agent tool loops and routing between specialized workflows, with validated arguments, bounded execution, and error handling; connected tools through MCP.
- Applied role-based and regional access controls to retrieved content and tool execution; used SQL for application data queries and tracked API latency and token usage.

EPAM Systems — Full Stack Engineer Nov. 2023 – Aug. 2025
React, TypeScript, NestJS, GraphQL, MongoDB *Hybrid*

- Developed frontend features and backend APIs for a business-workflow platform with AI functionality.
- Built GraphQL APIs with NestJS and MongoDB, implementing pagination to support large datasets.
- Developed reusable React components and integrated lazy loading for data-heavy interfaces.

Itransition Group — Software Engineer Jul. 2023 – Sep. 2023
React, Node.js, MongoDB, MySQL *Remote*

- Developed full-stack application features with React and Node.js; implemented data access with Mongoose and Sequelize.

Yandex — Frontend Developer Mar. 2023 – May 2023
React, TypeScript, Redux, GraphQL, RxJS, Jest

- Extracted B2B delivery logic into a microfrontend and removed duplicated code; developed delivery-system UI features.
- Migrated frontend data fetching from gRPC to GraphQL, resolved production defects, and tested asynchronous RxJS flows with marble tests.

PROJECTS

Freedom Telecom Kazakhstan — Full Stack Developer Aug. 2025 – Jun. 2026
Next.js, React, TypeScript, MapLibre *Remote*

- Built telecom platform features with Next.js App Router and MapLibre interfaces for layered map data; contributed to the migration from Ant Design to shadcn/ui.
- Standardized forms and validation with shared components and Zod; used TanStack Query caching and Zustand to manage server and client state on data-heavy screens.
- Prototyped an OpenAI-powered assistant for searching internal telecom documentation, using retrieval-grounded answers with source citations and a streamed chat interface.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL.
AI engineering: OpenAI API, streaming, tool/function calling, prompt engineering, embeddings, semantic search, RAG, agent routing, MCP, skills, evaluations.
Backend & data: Node.js, NestJS, Express.js, GraphQL, REST APIs, MongoDB, PostgreSQL, MySQL.
Frontend: React, Next.js, Vue 3, Redux, Pinia, Zustand, TanStack Query, MapLibre, shadcn/ui.
Engineering: Jest, RxJS, Git, CI/CD, role-based access control, caching, Feature-Sliced Design.

EDUCATION

Moscow Technological Institute 2023 – 2026
Bachelor's degree in Applied Informatics

Saint Petersburg State University 2018 – 2023
Computational Physics
